

Form View & Administration

General overview
1. Components of Form
2. Form Personalization
3. Form Customization
4. Form Menu
5. Form Layout
6. Form Design
7. Form Templates

A **Form** in ServiceNow is the interface that displays a single record from a table. It allows users to **view, create, and update** records.

Example: When you open one incident, one user, or one change request — you see a **form**..

Forms are the backbone of every ServiceNow module — Incident, Change, Request, Employee, Custom Apps — everything uses forms to display individual records.

Form Administration

Form Administration means **managing how a form looks and behaves** in ServiceNow. Only admins (or roles with permission) can do this.

Admins can customize forms using **Form Design** and **Form Layout**.

Components of a Form

- **Header** – It displays key fields that quickly describe the record (Number, State, Short Description).
- **Body/Fields** – This is the main area of the form where users enter or view data.
- **Sections/Tabs** – divide the form fields into groups for easy reading.(example - Details, notes, Assignment Information)
- **Related Lists** – shows linked records ,Displayed at the bottom of a form.(tasks, attachments, notes).
- **Form Buttons** – Save, Update, Delete, Resolve, etc.

The screenshot shows a ServiceNow incident form for incident INC0009005. The form is annotated with red text and arrows pointing to specific components:

- Header:** The top section of the form, containing fields for Number (INC0009005), Caller (David Miller), Category (Software), Subcategory (Email), Service, Service offering, Configuration item, Short description (Email server is down), and Description (Unable to send or receive emails).
- Fields:** The main area of the form where users enter or view data, containing fields for Channel (None), State (New), Impact (1 - High), Urgency (1 - High), Priority (1 - Critical), Assignment group, and Assigned to.
- Sections:** The section containing tabs for Notes, Related Records, Resolution Information, GRC, and secops. The Related Records tab is selected, showing fields for Parent Incident, Problem, Change Request, and Caused by Change.
- Related Lists:** The section at the bottom of the form, showing links to Task SLAs, Affected CIs, Impacted Services/CIs, and Child Incidents.

Form Personalization

Form Personalization refers to changes made **only for the current user**, not for everyone.

Purpose: Allows individuals to adjust the form to their working style without altering the actual form design.

Key points:

- Affects only the logged-in user, No impact on global configuration.
- Users can hide/show fields for themselves.
- Users can reorder fields, resize columns

Form Customization

Form Customization means **modifying the structure and behavior of a form for all users** in the system. These changes are global and affect everyone who opens that form.

Only **admins** or users with special permissions can customize forms.

Steps :

1. **Open the Record** : Go to any table (Example: Incident → Open an Incident record).
2. **Open the Form Menu** : Right-click the form header OR click the hamburger menu (☰).
3. **Select “Configure”**:

Choose Configure → **Form Layout** (for simple changes)

OR

Choose Configure → **Form Design** (for advanced design)

4. **Add or Remove Fields**

Form Layout :

- Move fields between Available and Selected lists
- Rearrange using Up/Down arrows

Form Design:

- Drag and drop fields onto the form

5. Create Sections or Tabs (Optional)

In Form Design, add sections/tabs to organize data.

Form Menu

The **Form Menu** is the menu you see when you **right-click the form header** or click the **hamburger (≡) icon** on a record.

It gives quick options to work with the current form or record.

Steps :

- 1) Open any form.
- 2) Look at the top-left or top-right corner for the **≡ (hamburger menu)**.
- 3) Click it to open the menu.

Form Builder

Form Builder is a visual, **drag-and-drop** tool used to design and customize forms for tables and catalog items. It simplifies form configuration so you don't need to edit form layouts manually.

How to Access Form Builder

Method 1: From a Record

1. Open any record for the table you want to customize.
2. Click on **menu bar in left side > Configure > Form Layout / Form Designer / Form Builder** (depending on version).
3. Select **Form Builder**.

Form Layout

Form Layout controls which fields appear on a form and how they are arranged. It determines the order of fields, the sections they belong to, and which fields are visible or mandatory.

Use Case Example: HR employee form: move “Employee ID” and “Name” to the top, group “Address” and “Contact Info” in separate sections.

Form Layout

1. Open a record → Right-click header → **Configure** → **Form Layout**.
2. Move fields between **Available** and **Selected**.
3. Arrange order using arrows.
4. Click **Save**.

Form Design

Form Design is a **drag-and-drop** tool that allows **visual design** of forms without dealing with code. It's more flexible than Form Layout for creating user-friendly forms.

Form Design – Short Steps

- 1) Open a record → Right-click header → **Configure** → **Form Design**.
- 2) Drag fields from navigator into sections.
- 3) Arrange fields and columns visually.
- 4) Preview → Click **Save**.

Form Templates

A Form Template is a predefined set of field values that you can apply to a form when creating a new record. It saves time and ensures consistency by auto-filling certain fields.

Access Steps:

1. Go to a table (e.g., Incident).
2. Navigate to **System Definition** → **Templates** → **New**.
3. Fill in **Name**, **Table**, and **Default Field Values**.
4. Save the template.
5. When creating a new record, click **Templates** → **Choose Template**.

The screenshot shows the ServiceNow interface for creating a new template. The header bar includes the ServiceNow logo, navigation links (All, Favorites, History, Workspaces), and a search bar. The main content area is titled 'Template - Create TEMPLATE7'. The form includes the following fields:

- Name:** TEMPLATE testing
- Table:** Incident [incident] (highlighted with a blue arrow and the text 'target table')
- Active:** ☒
- Application:** Technova Project Management
- Domain:** global
- User:** System Administrator
- Groups:** ☐
- Global:** ☐
- Short description:** (empty text box)
- Template:** -- choose field -- (highlighted with a blue arrow and the text 'template feilds')

At the bottom of the form, there are three buttons: Clear, Submit, and Schedule.
