List View and Administration

List View :- List View is a UI element that displays a list of records or data from a specific table in a tabular format.

Number	Opened	Short description
INC0010005	2025-11-06 02:54:41	One more found dead in the women's washroom.

INC0000601	2025-10-07 02:42:59	The USB port on my PC stopped working
INC0000060	2016-12-12 07:19:57	Unable to connect to email
INC0000059	2016-08-10 09:14:29	Unable to access team file share

Key Features of a List View

1. View and Navigate Records

- You can open any record by clicking its number or name.
- Browse many records at once.

2. Personalize/List Controls

Users can customize the list by:

- Showing/hiding columns
- Reordering or resizing columns
- Filtering records
- Saving List Layouts
- Sorting by any column

3. Filtering Records

Use:

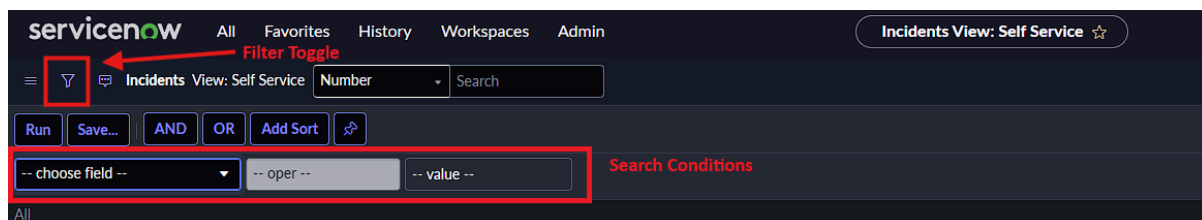

- Filter Breadcrumbs (e.g., *Active = true*)
- Condition Builder
- Search bar
to find specific records.

4. Inline Editing / List Edit

You can edit certain field values directly in the list (depending on permissions).

Filters and Search Conditions in Lists

Filters -: Filters are nothing but an OOB tool which has a set of conditions which is used to display some specific type of records which meets its criteria.

Note - Created Filters can also be saved as well to be used for a later use.

Search Conditions -: Search conditions in ServiceNow are the rules or criteria you apply to filter records in a list or query.

They tell ServiceNow which records to return based on field values.

Search Conditions are dependent upon the data type of the field of record on which you want to apply the search.

For Example,

Field	Operator	Value	Meaning
Priority	Is	1 - Critical	Records with priority 1
State	Is not	Closed	Records still active
Assigned to	Is	(me)	Your assigned tickets
Short description	Contains	email	Tickets mentioning "email"
Created	on	Today	Created today
Updated	More than	7 days ago	Older tickets

Types of Record Searches

1. **Global Search** :- A quick, platform-wide search from the top-right search bar.
 - Searches multiple tables at once (based on configuration).
 - Returns matches in a grouped format (Incidents, Knowledge, Catalog, etc.).

- Useful for finding anything in the system when you're not sure where it is.

2. **List Search** :- Performed inside any list view of a table (e.g., Incident list).

Two main forms:

a. Filter Search

- Use Add Filter to create conditions like:
 - Priority is 1
 - Assigned to is me
 - State is not Closed

b. Keyword Search in List Filter (Search field at top)

- Searches only within the currently listed fields.
- Example: typing “email” filters records with “email” in a visible column.

Condition Builders

Condition Builder is the tool used to create search conditions, filters, and rules by selecting a field, an operator, and a value—without writing code.

Incidents View: Self Service Number Search

Run Save... AND OR Add Sort

All of these conditions must be met

- Active is true
- Category is Software
- Due date on Today

Condition Builders

Number	Opened	Short description
INC0010005	2025-11-06 02:54:41	One more found dead in the women's washroom.
INC0010004	2025-11-06 02:37:52	The Aabhran Lincoln killed someone in the floor 3rd washroom.
INC0010003	2025-11-06 02:26:11	My Application is crashing again and again
INC0010002	2025-11-05 22:42:36	MY outlook has crashed.
INC0010001	2025-11-05 22:34:26	Got a WIFI Problem at my desk buddy
INC0009009	2018-08-30 01:06:16	Unable to access the shared folder.

- AND → It works the same as the AND Gate. It will match all the conditions connected with the AND Gate and show the result.
- OR → It works on the either or condition. It will show the result of records if any one of the given conditions is matched.

Breadcrumbs

Breadcrumbs are the clickable filter conditions that appear at the top of any list view after you apply a filter.

They show exactly which conditions are currently filtering the records, and they allow you to edit, remove, or drill into the conditions quickly.

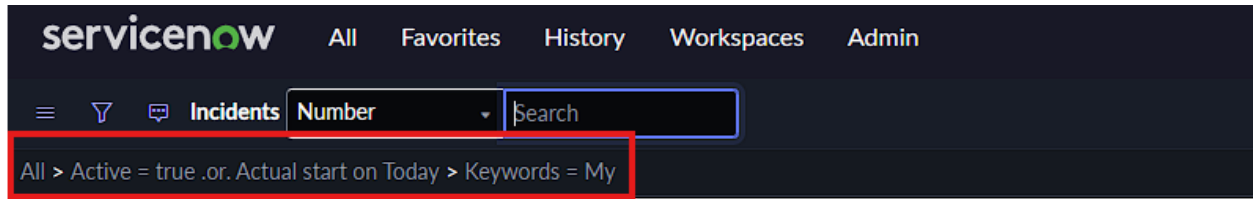

Tasks Go to Number Search

1 to 100 of 139

All > Assignment group = (ServiceNow License Management, ServiceNow Team, IST) > Active = true > Status != Deferred

Number Caller [Incident] Priority Status Short description

Search Search Search !=6 Search

Why use breadcrumbs??

Breadcrumbs help you **see**, **understand**, and **modify** the filters currently applied to a record list.

They prevent confusion by showing:

- What conditions are applied
- Why certain records are shown
- What hidden filters the module may have by default

Note :-

You can save a list with breadcrumbs applied as:

- Favorites
- Personalized list layouts
- Reports

Example:

Create a breadcrumb filter like:

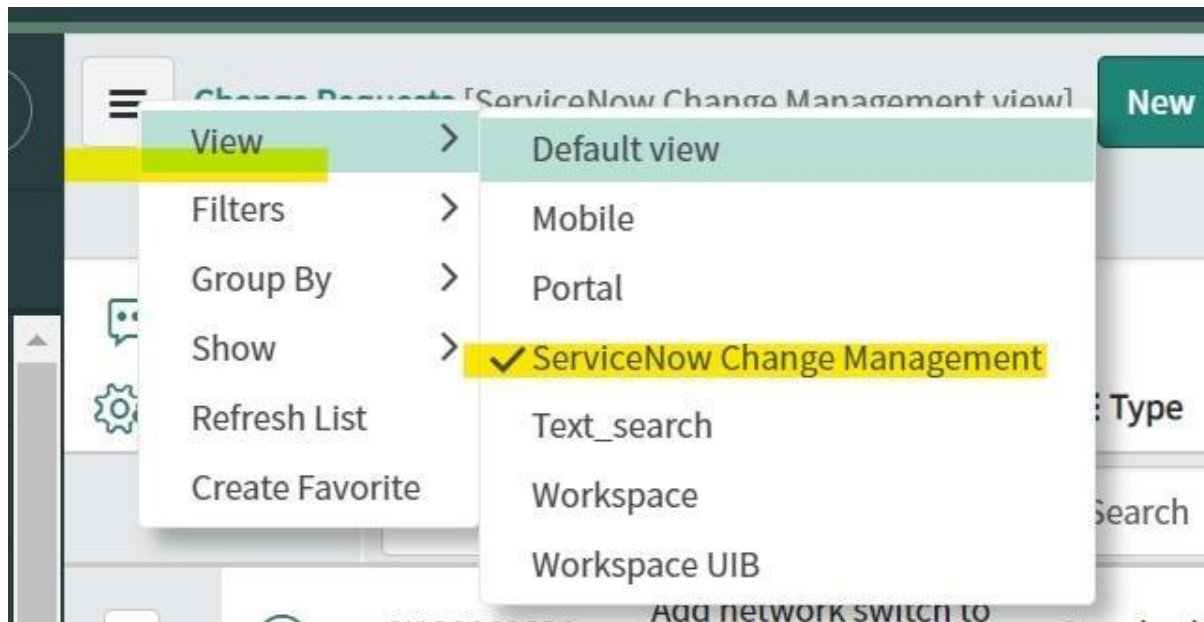

Priority = 1 > Assignment group = Network > Active
= true

Then click ★ (favorite) to save it.

Context Menus

Context Menus are the right-click or drop-down menus that appear on forms and lists, giving users quick access to actions related to the selected record or field.

They help you perform actions faster without navigating through multiple modules.

Note :- You can also customize the List Context Menus from

All —> System UI —> UI Context Menus

There are **four main types** of context menus in ServiceNow:

1. **List Context Menu** :- Appears when you right-click anywhere on a record list.
2. **List Column (Header) Context Menu**:-
(right-click the column header)

Used to manipulate column-specific options.

Actions include:

- Sort (ascending/descending)
- Show Matching (filter for all records with the same value)
- Filter Out
- Group By <field>
- Bar Chart / Pie Chart
- Create Quick Report
- Configure → Column

Opened	Short description	Caller	Priority
2025-11-06 02:26:11	My Application is crashing again and again	Administrator	3 - Moderate

2025-09-20 13:48:40	SAP Financial Accounting application appears to be down	Bud Richman	1 - Critical

3. List Row Context Menu :-

(right-click a specific row/record)

This applies actions to a single selected record.

Actions include:

- View / Edit record
- Copy sys_id
- Create favorite
- Assign
- Delete
- Show related records

4. Form Context Menu:- (right-click the form header or click the hamburger icon ≡)

Personalizing and Customizing Lists

List personalization/customization means changing how a list of records (like Incident, Change, Problem) is displayed for yourself or for all users.

Personalization (User-Level) :--- Changes visible only to you.

Customization (Global-Level) :--Changes the list layout for all users.

Note:- Customizations can only be done by the Admin or some specific roles and the changes will be visible to every user.

To Customize:

- Right Click on the Table head and go to Configure → List Layout

List view

View name Default view

Create new field

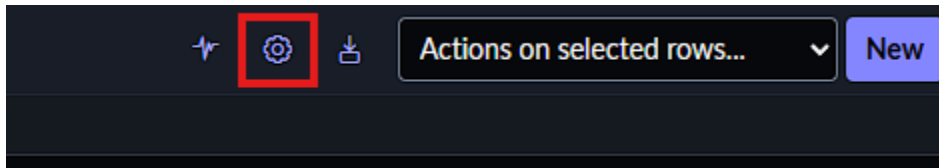

Name
Type String
Field length Small (40)

Add

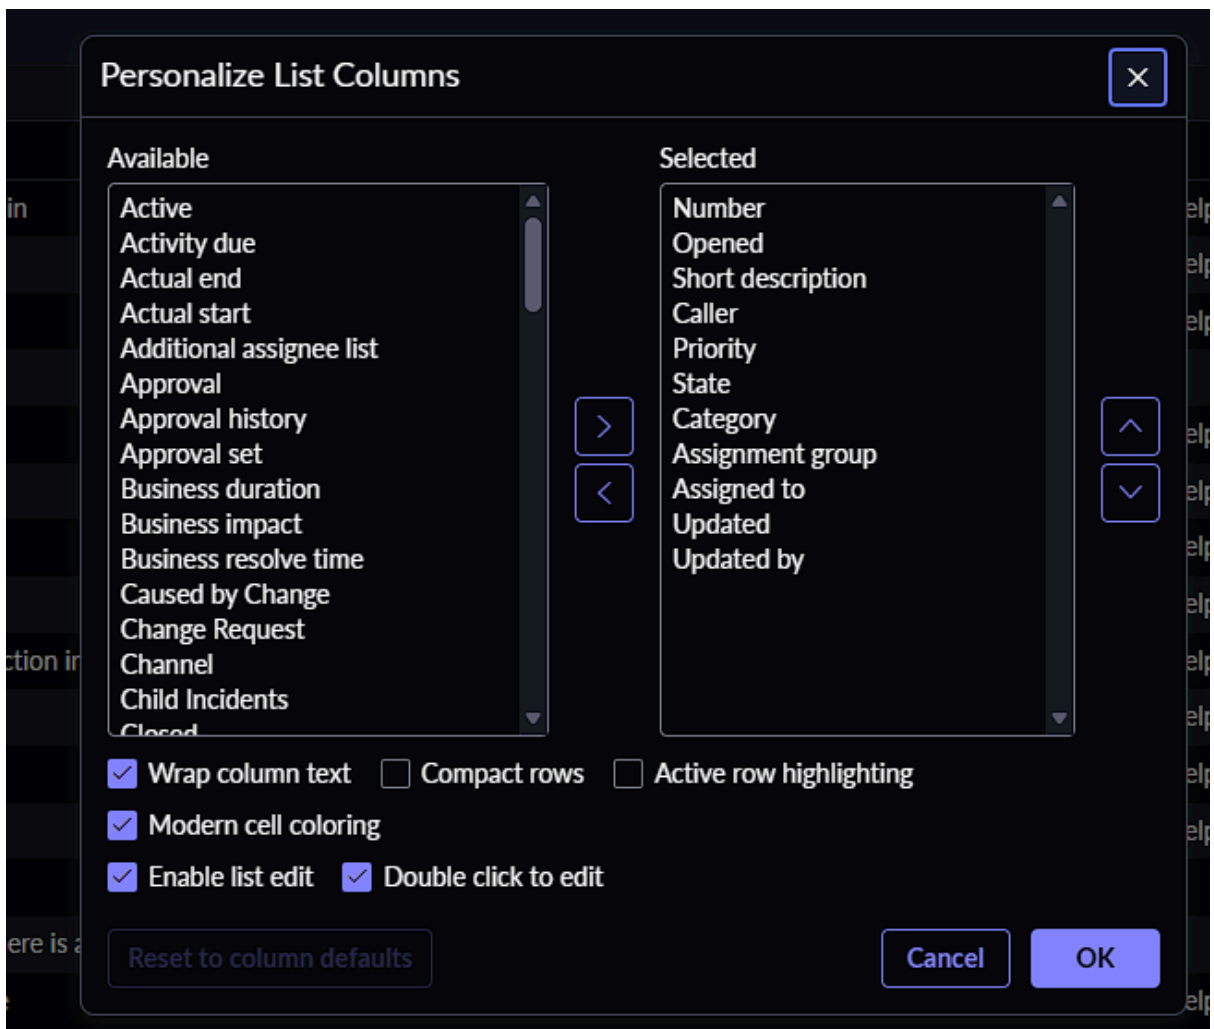

This will reflect to all of the users.

To Personalize:

Click on the Gear Icon at the top right corner of the table

It will open a personalization menu

Just do some changes and save it, It will only be reflected to you.

Add to Favourite For Filters

Adding a Filter to Favorites in ServiceNow lets you quickly access a filtered list view without rebuilding the filter each time.

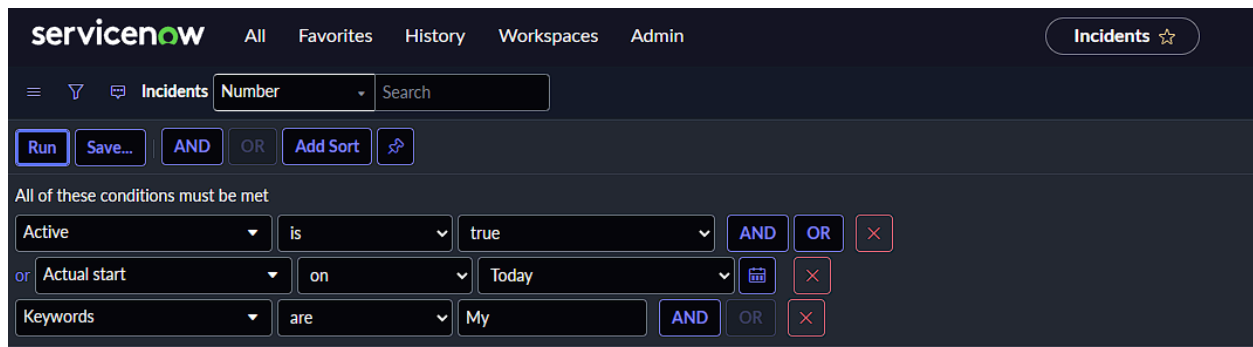

It saves your current filter + list layout so you can access it anytime from the Favorites menu in the left navigation.

This helps you:

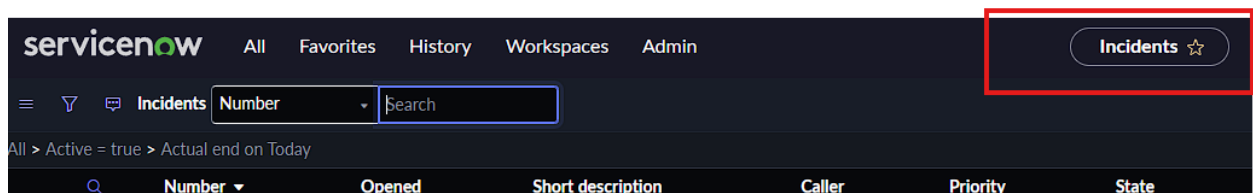

- Avoid recreating the same filter
- Maintain consistent views
- Jump to your frequently used lists instantly

Steps to Add to Favourite a Filter :-

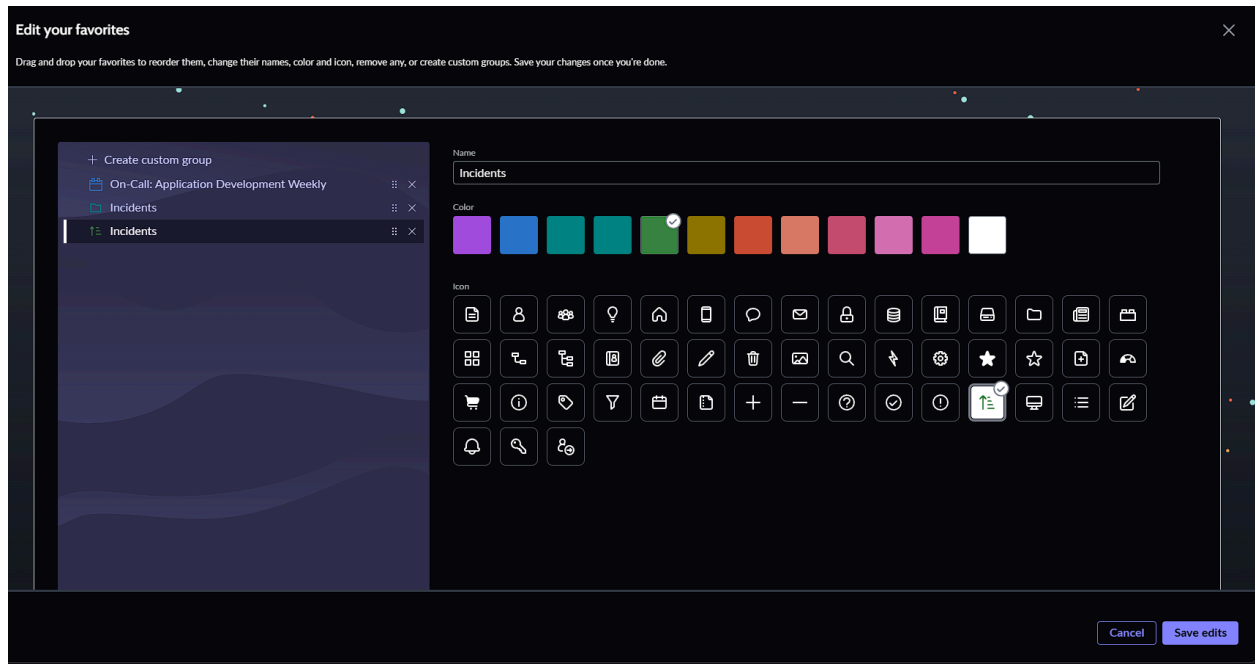

- Apply your filter

- Look at the top-left of the list

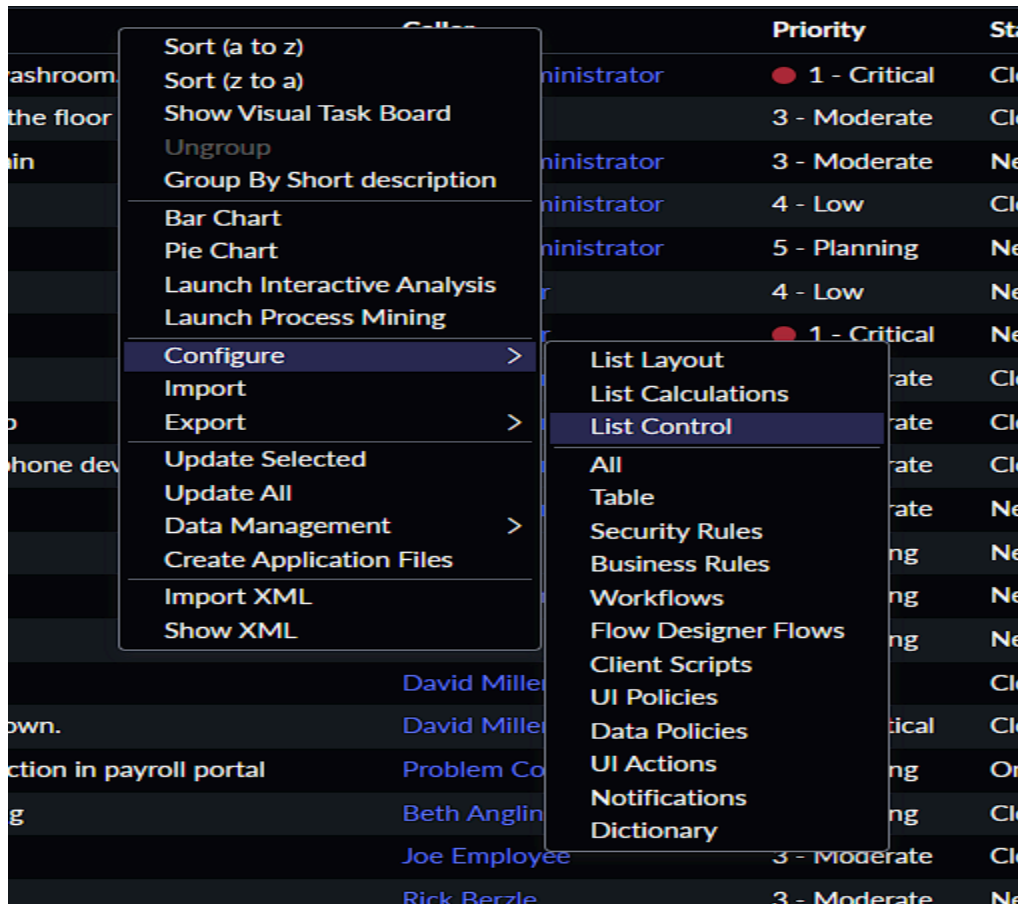

- Click the ★ favorite star icon
- Name your favorite

List Controls

List Controls are configuration options that allow administrators (and sometimes users) to control the behavior and appearance of lists in ServiceNow.

List Controls can be found in Configure → List Controls when you will right click on the list.

Functions of List Controls

List Controls allow you to enable or disable features such as:

1. **List editing**
 - Enable inline editing on a list
 - Enable editing multiple rows at once.
2. **List search & filtering**

Turn on/off:

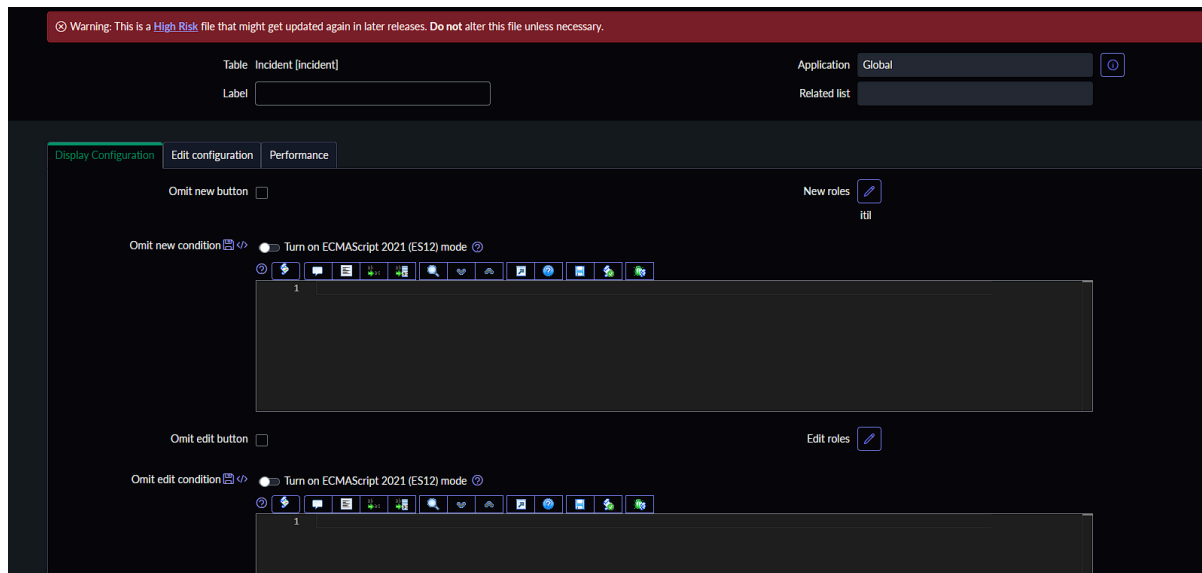

- Breadcrumbs
- Hierarchical lists
- List search options

3. List UI behavior

- Show or hide:
 - Add New Button
 - New record insertion
 - Related list visibility
 - Row numbering

4. Security / performance settings

- Restrict export
- Limit data returned
- Enable/disable list collapsing

Omit:- In List Controls, “Omit” means *hide* or *remove* something from the list UI.

It prevents users from seeing or using certain UI actions on a list.

You can check on the omit checkboxes, and it will hide the corresponding buttons and restrict corresponding actions.

List Calculations

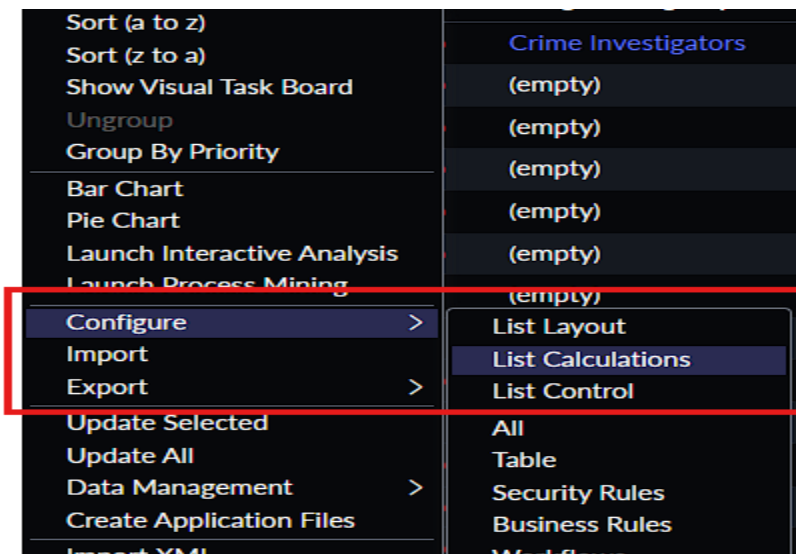

List Calculations in ServiceNow are built-in functions that let you perform quick mathematical or statistical calculations on numeric fields directly from a list view.

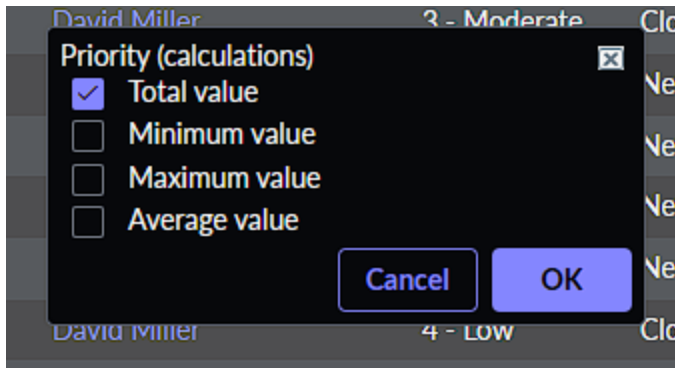

It works the same as in the Excel in which we can find Minimum, Maximum, Average, Sum, Total Count etc.

They work on:

- Number fields
- Integer fields
- Decimal fields
- Currency fields
- Duration fields

It can be found in the Configure → List Calculations when you right click on a particular column of a table.

Problem CoordinatorATF	5 - Planning	On Hold	Inquiry / Help
Beth Anglin	5 - Planning	Closed	Hardware
Joe Employee	3 - Moderate	Closed	Inquiry / Help
Rick Berzle	3 - Moderate	New	Inquiry / Help
Sum		202	

Wildcards

Wildcards are special characters you can use in filters, searches, and conditions to match patterns in text.

These wildcards are used in list filters, condition builders, searches, and encoded queries.

Wildcard / Operator	Meaning	Example
*	Matches any characters (contains, starts, ends)	*serv* → contains “serv”
%	Matches any characters (used in LIKE queries)	short_descriptionLIKE%error%
=	Starts with	=Inc → begins with “Inc”

!=	Not equal	<code>priority!=1</code>
^	AND (encoded query)	<code>active=true^priority=1</code>
^OR	OR (encoded query)	<code>priority=1^ORpriority=2</code>
^EQ	End of encoded query	<code>active=true^EQ</code>
ISEMPTY	Field is empty	<code>assigned_toISEMPTY</code>
ISNOTEMPTY	Field is not empty	<code>categoryISNOTEMPTY</code>
LIKE	Contains text	<code>short_descriptionLIKEserver</code>
NOT LIKE	Does not contain	<code>short_descriptionNOT LIKEtest</code>
IN	One of these values	<code>priorityIN1,2,3</code>
NOT IN	Excludes values	<code>stateNOT IN6,7</code>
STARTSWITH	Begins with	<code>emailSTARTSWITHadmin</code>
ENDSWITH	Ends with	<code>emailENDSWITH@gmail.com</code>
BETWEEN	Range for dates/numbers	<code>opened_atBETWEEN2024-01-01@2024-01-31</code>

Where Wildcards Work in ServiceNow?

Wildcards work in:

List filters

Example: *Caller contains "jo"* → `*jo*`

Condition Builder

Example: *Short Description* → *starts with* → “net”

Global search

(But not all wildcards are supported here—mainly *****)

Encoded queries

Used in scripts, UI actions, business rules.

Reference field search

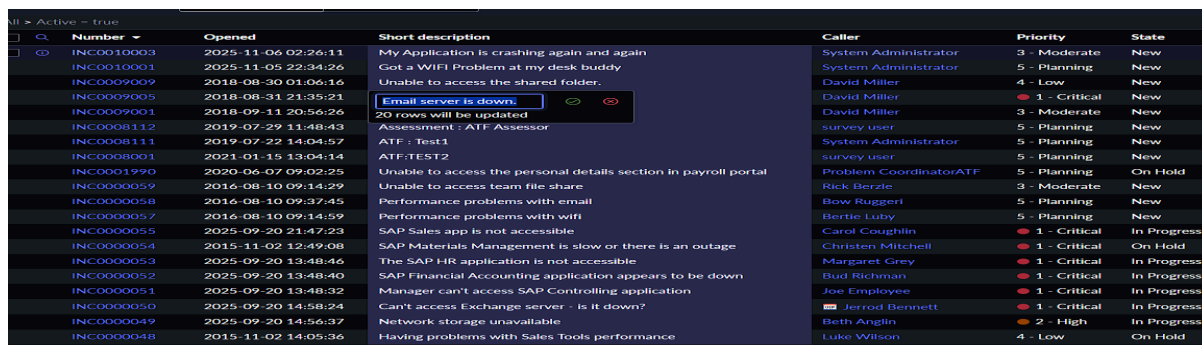

Example: searching users with first name containing “ann”:

ann

How to Update Multiple Records???

For bulk editing, make sure your list edit is enabled from the List Controls.

Just select the multiple cells of a column, and right click on it.
