

Banking Application UI Policies / Data Policies Requirements

Objective:

Implement dynamic form behavior within the Banking Application using UI Policies to enhance usability, data integrity, and control visibility, read-only, and mandatory states of form fields based on specific conditions.

Scope:

This assignment covers only UI-level behavior changes — no scripting, notifications, or automation. All conditions should be handled using UI Policy Conditions and UI Policy Actions.

Requirements:

Requirement 1: Transaction Form – Read-Only on ‘Success’ or ‘Failed’

When the Transaction Status is set to ‘Success’ or ‘Failed’, the transaction record is considered final. In these states, the ‘Transaction Amount’, ‘Transaction Type’, and ‘Transaction Date’ fields should become Read-Only.

- *Note:* If the status is ‘Pending’, these fields should remain editable.

Requirement 2: Bank Account Form – Minor Account Restrictions

When the Account Type is selected as ‘Minor’:

S2 Labs

1. The 'Date of Birth' field should become mandatory (to ensure age verification).
 2. The 'Daily Withdrawal Limit' field should be hidden (as minors may not have withdrawal privileges).
- *Note:* If the Account Type is 'Saving' or 'Current', the 'Date of Birth' should be optional, and the 'Daily Withdrawal Limit' should be visible.

Requirement 3: Loan Allocation Form – Tenure Details Visibility

The 'Tenure' field should only be Visible when a 'Tenure Type' (Year/Month) has been selected.

Requirement 4: Bank Account Form – Address Dependency

To ensure complete address data is captured:

1. The 'City' field should only be Visible if the 'State' field is not empty.
2. When the 'State' is filled, the 'City' field should also become Mandatory.

Requirement 5: Unique Identifiers – Read-Only Behavior

To prevent accidental data corruption of core banking identifiers, the following fields should be Read-Only at all times (applies to all states/conditions):

1. 'Branch Code' on the Branch Table.
2. 'Account Number' on the Bank Account Table.

Requirement 6: Transaction Form – Mandatory Transaction Details

To prevent invalid ledger entries, when a Transaction record is being created or edited, the 'Account' (Reference) and 'Transaction Amount' fields must always be mandatory.

Requirement 7: Loan Allocation Form – Progressive Field Visibility

To keep the form clean, the 'Principal Amount' and 'Tenure Type' fields should be hidden until a specific 'Loan' (Reference) is selected.

- *Reverse Logic:* Once a Loan is selected from the reference lookup, these fields should appear.
